

The Michigan Society of Professional Surveyors objects to the proposal made to the FCC by LightSquared. Surveyors in Michigan and throughout the United States will be negatively impacted if the LightSquared proposal were to be approved. As professional users of GPS, the accurate and precision levels are required. LightSquared would prohibit GPS use by Surveyors. If LightSquared's proposal is approved it would set back the use of technology by Surveyors by rendering current high-priced equipment unusable. The result would be increased time and cost for performing surveyors. In the end, the general public would suffer for the increased costs.

The Michigan Society of Professional Surveyors strongly opposes the approval of the LightSquared application and proposal.
